Title Page

Theory of actual “Brilliances” by Brandon W Ives

The Electrodynamics of Moving Bodies - A. Einstein

My Notes: 9080 02417 8235 -
https://archive.org/details/principleofrelat00eins/page/n5/mode/1up

Notes

My comments, questions, and theories based off of
Professor Albrecht Einstein paper and papers, published by M.I.T..

My comments:

Asymmetry: equal equal is balanced, over observed phenomena is unbalanced or not equal to asymmetry.

My interpretation: Maxwell theory is wrong based off of what was stated by him and what was observed (phoenamina).

Magnet and conductor: 1 plus 1 or one plus one equals energy where one or 1 is equal to differential meaning they do not have to be equal but in conjunction the work to create a whole or in this case energy/movement.

One or other but it's not

Question of what meaning is go back over and re-read/ponder upon.

"which excites a current in those parts of the field where a conductor exists"? Pg.1 - if magnet moves only energy equal to magnet is produced

Questions:

Why are Roman numeral numbers on the top right then top left of the page and vice versa?

The Electrodynamics of Moving Bodies - moving bodies isn't human bodies it's the cells or X within the body of Y where Y is = to ….?

Correlation:

"It is well known" - it is not well known but makes the most accuracy / sense.

Notes:

one whose cause or explanation is in question - Phoenomena / said twice within first x (first page that I'm reading so far) meaning memorize (or remember letters) as it is important, and mostly to be used in future pages. "Most likely".

it being of course assumed that the relative motion in both of these cases is the same. --> proving that maxwells theory is incorrect dude to the magnet moving and being constant and the conductor not having motion or moving being equal to output zero so (not equal amount of output) if relative motion is ….

Comments

“Examples of a similar kind such as the uusueeessful attempt to substantiate the motiou of the earth relative to the " Light-medium " lead us to the supposition that not only in mechanics, but also in electrodynamics, no properties of observed facts correspond to a concept of absolute rest: but that for all coordinate systems for which the mechanical equations hold, the equivalent electrodynamical and optical equations hold also, as has already been shown for magnitudes of the first order”.

Reflection

Formula -

1) Formula(s):
https://ia801302.us.archive.org/BookReader/BookReaderImages.php?zip=/20/items/principleofrelat00eins/principleofrelat00eins_jp2.zip&file=principleofrelat00eins_jp2/principleofrelat00eins_0046.jp2&id=principleofrelat00eins&scale=4&rotate=0

2) Formulas that are proven based on Einstein discovery / formula broken down by me (Ives). Where this is the origin or the second end and beginning location.

(X,Y,Z) X2+Y2+Z2 =C2T2

3) New formula given number 2 simplified to x degree. Example f(x) = f of x. This is the origin before origin two also known as starting point which is shown in formula terms in 2). However the starting point can not be before existence or energy.

(X,Y,Z) X1+Y1+Z1= C1T1

Pg. 5 Universal Constant. 2 is example 2 where AB is over time derivative A' where the example shows C.
